

# LUMINOBIT AIRDROP

**JOIN OUR COMMUNITY AND GET FREE TOKENS**

## What is Airdrop and how does it work?

Airdrop is a cryptocurrency distribution method that allows users to receive free tokens from a Luminobit ICO. It works by sending new tokens to cryptocurrency wallets. These new tokens are then automatically distributed to the user's Luminobit web wallet.

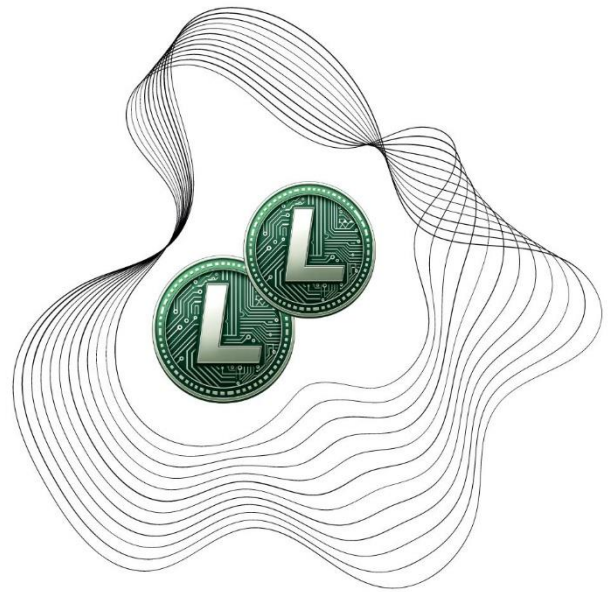

### **Holder Airdrop**

In the holder airdrop, tokens are distributed to investors who hold 20,000 or more tokens (KYC required). Only certain amounts may be available during these events, so participating early is advantageous!

### **Premium Airdrop**

If you're looking to get ahold of some extra Luminobit Tokens, participating in the Premium Airdrop is a great way to do it. Every Sunday until the end of the ICO presale, anyone who holds at least 150,000 LMB Tokens will enter into a drawing to receive a significant airdrop of additional tokens. The more LMB Tokens you hold, the better your chances are of winning - so if you're looking to give yourself a boost, now's the time to start accumulating those tokens.

### **Referral Airdrop**

In today's world, each of us has wondered at least once what it would be like to be in the shoes of a well-known influencer. We're offering you the opportunity to become a person with the same privileges as them. Refer people within your circle, and you will receive 10% of Luminobit tokens from each completed purchase. Additionally, each person who participates in the ICO presale through your referral will receive an additional 10% on top of standard ICO Bonus. Individuals with a minimum of one referral will meet the eligibility criteria for this airdrop. Kindly review your account for further details.

Airdrops are dropped every Sunday.
